

Veolia Water Technologies — Your Best Source for Parts and Service

Profitable operation depends on properly functioning leaves and parts on your filtration equipment. It makes sense to buy spare parts and filter leaves and to schedule your regular maintenance checks from a company that is the leading provider of filter treatment systems, products and services. At Veolia Water Technologies all parts and leaves are designed, engineered and manufactured to your equipment's specifications, ensuring top performance and long-term operation.

Veolia's laser leaves are the highest quality design you can buy. All of our leaves provide maximum strength and flow with minimum pressure drop across the filter vessel. Both wire and cloth covered leaves are available to fit all of your equipment.

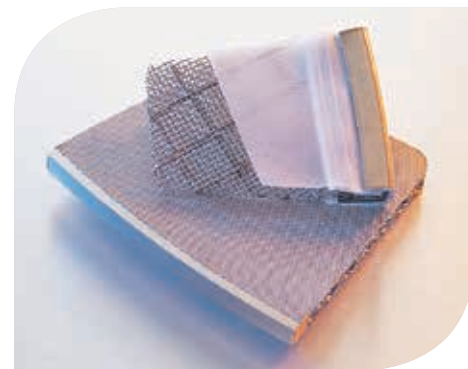

We offer complete refurbishment of your filter units. Existing filters can also be updated to take advantage of new design technologies or to accommodate your changing process needs. In addition, we can help you keep your Auto-Jet® filter in peak condition with our Auto-Jet® replacement door, manufactured to ASME code.

When leaves are damaged, it is not always necessary to buy a new leaf. We are equipped to rebuild your damaged leaves to original specifications.

Veolia is not only your best source for leaves and parts, we are also the best source for maintenance and service. Our team of service representatives and engineers is ready to fill your order and create a scheduled maintenance program for your equipment.

If Veolia is the original manufacturer of your equipment, all we require is the serial number from the nameplate attached to the exterior of the vessel.

Veolia has a large inventory of spare parts to meet your needs. Frequently requested items include bearings, gaskets, o-rings, leaf guide rollers and spray jets.

Our leaves are engineered and manufactured to the highest quality. Our laser welded leaf is the best in its class.

Our large inventory of spare parts ensures that we can provide the right part for your equipment. Profitable operation depends on properly functioning leaves and parts on your filtration equipment.

Laser Filter Leaves-Round

Designed to be leak-proof with a positive and complete seal at the outer periphery of the leaf.

T-Bar, T-Channel Leaves

Ideal for rugged operating conditions. Typical applications include the petroleum, chemical, mining, beer and food industries.

Cloth Covered Leaves

Available in a variety of porosities, materials and meshes to meet your needs.

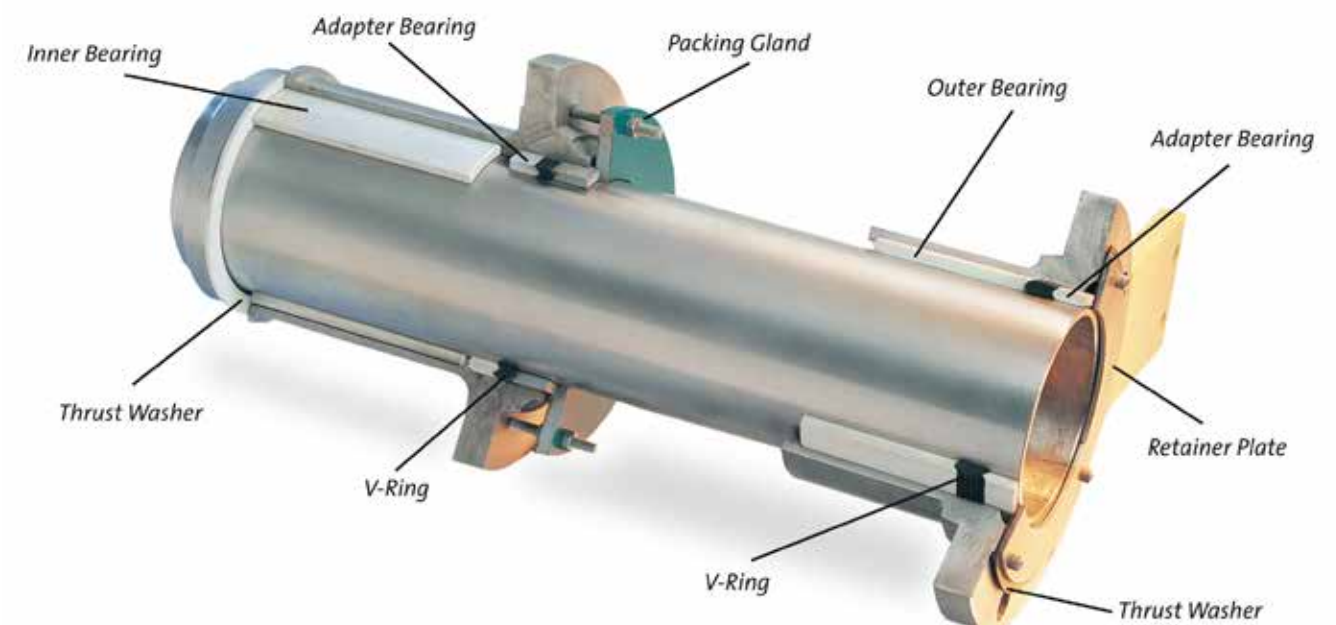

Non-Metallic Leaves

A low-cost alternative to exotic metals. These leaves are ideal for caustic chlorine, brine and corn syrup processes.

We also offer a complete line of flow nozzles for L'eau Claire and Maxi-Flo Systems.

Internal parts are out of mind until there is trouble.
Keep your filtration equipment running smoothly
by establishing a scheduled maintenance program.
